Student Name: M Ramya Sri

Reg. No.: 192372144

Course Code: CSA1305

Slot: D

Course Name: INTERNET PROGRAMMING

Course Faculty: Dr. D.Sudhakaran

Project Title: Student Skills Development management system

Photographs: (2 photographs –Module photo contribution module work in the project and presentation image)

The left screenshot displays the 'Student Registration' form. It includes fields for Full Name (ganeswari), Register Number (192372144), Email address (ganeswari2183.sse@saveetha.com), Department (CSE-AI), Year (4), Semester (07), Password (*****), and Confirm Password (*****). A 'Register Account' button is at the bottom. The right screenshot shows the 'My Skills' dashboard. It features a sidebar with navigation links: Dashboard, My Profile, My Skills, Skill Assessment, Learning Courses, Recommendations, Progress, Achievements, and Reports. The main area displays progress bars for various skills: SQL (53%), Artificial Intelligence (100%), Data Structures (22%), Machine Learning (80%), Cloud Computing (42%), and Time Management (45%). Each skill card also shows 'Current' and 'Target' levels and a 'Not Started' button.

Output

Project Description: (here you write what you did in this project (contribution) including Model Description)

The Student Skills Development Management System is a web-based platform developed to connect academic learning with current industry expectations. Its main goal is to help students identify, monitor, and improve their technical and soft skills according to their preferred career paths, including Software Development, Data Science, and AI Engineering. Through a centralized and interactive dashboard, students can manage their professional development by maintaining personal profiles, recording progress in different learning courses, and viewing their skill growth through charts and analytics. The system also provides skill assessments with different levels of difficulty and encourages participation by recognizing completed activities through achievements and badges. In addition, it can produce detailed and printable reports that summarize a student's complete skill profile, supporting placement preparation, resume development, and academic evaluation by administrators. The application uses Python and FastAPI for the backend, providing fast and secure API services, while MongoDB is used as a flexible NoSQL database for storing student profiles and analytics. The frontend is implemented using HTML, Vanilla CSS, Bootstrap, and JavaScript. By bringing these functions together, the platform provides a structured way for students to understand their current capabilities, identify areas for improvement, and prepare more effectively for future academic and career opportunities.
